

Features of monitoring system

- Compact laser particle sensor (LPS) with built-in LCD for continuous monitoring of aerosol level
- Multi-function, user-friendly monitoring software
- Reduced piping & wiring by the use of compact pump unit paired with each LPS
- Inter face unit for environmental sensors such as temperature/humidity sensor, differential pressure sensor etc.

Features of monitoring software

By the maximum use Windows OS functions such as multi-task, multi-window and network environment, this software is capable to display, print and download the measurement data from any given sensor.

Main menu

- Map display for real-time monitoring of cleanroom conditions
- Windows Version (Compliance with multi-task, multi-window and network environment)
- Compliance with multiple sensors (incl. other brand)
- Class Judgement according to Federal Standard 209E/JIS B 9920
- Sensor maintenance data storage

Hardware requirement

| | |
|-----------|-----------------------------------|
| CPU | Pentium II 300MHz or higher |
| RAM | 64MB or higher |
| HARD DISK | 4.3GB or higher |
| LAN | Correspond to 100BASE-TX/10BASE-T |
| OS | Windows 95/98, NT. |
